

Distribution Services

G&D Integrated distribution services optimize supply chains by enabling winning strategies and best practices.

G&D Integrated distribution services optimize supply chains by enabling winning strategies and best practices.

G&D Integrated distribution services optimize supply chains by enabling important strategies such as cross-docking, consolidation, postponement and vendor managed inventory. The utilization of efficient practices in combination with up to date technology enables G&D Integrated to optimize distribution and inventory performance.

Warehousing. To ensure inventory is efficiently processed, our warehousing storage is capably managed by WMS (Warehouse Management System).

Cross-Docking. Creating and executing cross-dock programs that efficiently move product from the dock to shipping, we bypass long-term storage and speed delivery, reducing handling costs.

Consolidation/Deconsolidation. We combine shipments to maximize shipment loads and reduce transportation costs.

Vendor Managed Inventory. VMI allows manufacturers to postpone inventory ownership so material is visible and available locally while still owned by the supplier. G&D handles the physical movement and the electronic transactions between manufacturers and suppliers, optimizing asset flow and reducing costs.

Inspection Services. We inspect all products to customer standards, ensuring quality before distribution.

Rework Services. We correct defective, failed or non-conforming items during or after each inspection.

Postponement Services. Through our postponement services, semi-finished products can be quickly customized to meet demand while lowering inventory levels.

Order Fulfillment. We deftly handle order fulfillment so that customers receive accurate delivery of goods.

Centralized Examination Site (CES) for U.S. Customs. G&D Integrated provides total Customs examination facilities.

Bonded Warehousing. We store and manage dutiable landed imports in secure facilities pending their re-export or consumption.

Logistics Planning. Our logistics planning analysts manage the flow of goods through the supply chain, allowing our customers to focus their personnel on their core, value-added processes.

On-Site Material Handling Services. We provide management, labor and equipment to execute logistics support functions at a customer's site, which can provide greater flexibility, reduce assets and lower costs.
